

*i*business™ (ERP)

Enterprise Management Solutions

ibusiness™ is a feature rich enterprise-wide software package which integrates all your business processes from Sales Order processing to Manufacturing Planning.

For more than 10 years ibusiness™ software has helped small and medium sized companies in manufacturing, distribution and other industries ranging from pharmaceuticals to electronics, food processing, medical device manufacture and design. Led by a management team with over 40 years of manufacturing and industry experience, we are constantly engaged in a dialogue with our customers to identify trends and requirements so that we can ensure our products continue to meet their needs.

Our existing customer base spans the US, Canada, Mexico, France, the UK and Ireland.

You only have to look at the advantages of *ibusiness™* to appreciate the quality of the product:

- Rapid implementation
- User friendly
- Integrated Accounts Package
- Rapid access to critical data
- Control user access to individual features
- Modern graphic user interface
- Fully integrated
- Feature rich
- Can be customised to your specifications

Our APICS® certified consultants are available to guide you through the entire process from requirements generation to implementation and user training. IES provides a one-stop shop for training, support and consultancy right where you need it when you need it. This includes providing on-site training if required.

ibusiness™ can be implemented in a fraction of the time it takes to get other packages up and running and that's despite the fact that it has many features only found in solutions costing ten or more times the price.

Over 10 years of development have gone into *ibusiness™* much of it in consultation with people in industry who required solutions to meet their

needs. This process is on-going with improvements being made to the product almost daily.

ibusiness™ is fully cross-platform and runs equally well on Windows®, Windows NT® and Macintosh® and can easily be used on mixed networks with Windows, Macintosh or Linux Servers*.

Users and Managers alike love our product because it gives them the information they need when they need it in a simple and straightforward manner. Systems Administrators love the fact that *ibusiness™* is easy to set up and configure, as well as the fact that it has numerous utilities designed to make their job easier.

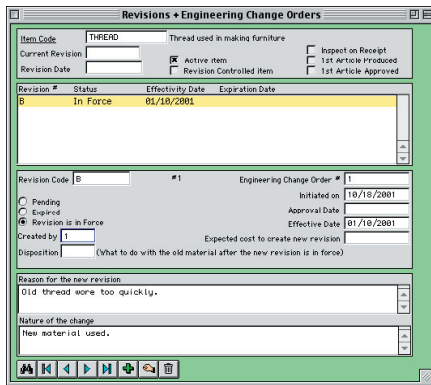

Whether you deal in the Euro, Sterling, Dollars or Yen you'll find that *ibusiness™* handles multi-currency transactions with ease. You can enter each transaction in it's original currency, while *ibusiness™* takes care of the conversion to the local currency.

Contact us today for a consultation or demonstration. You won't be disappointed!

* Additional software may be required.

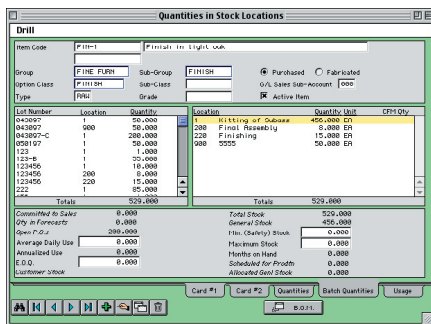

'ibusiness™ gives small and mid-size companies the tools they need to fully integrate their business processes and realise their potential!'

Here are some illustrative screenshots of just a few of the features ibusiness™ offers...

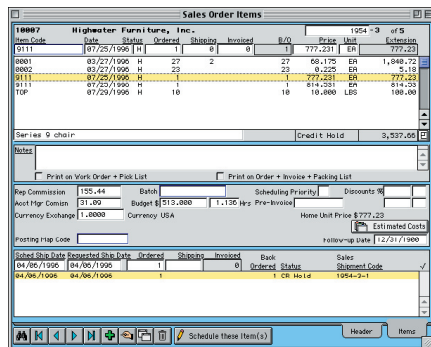

Engineering Change Orders

Regardless of whether you make widgets, sports bows for archery or flavours for ice cream you will need to manage and track every version of your products together with its associated documentation and history.

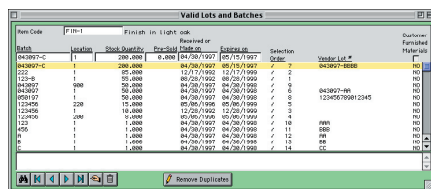

Quantities in Stock Locations

Being able to tell if an item is in stock can make the difference between making a sale and losing it. Knowing where to find the items in a timely efficient manner may just be the benchmark your customers use in deciding whether to buy from you again.

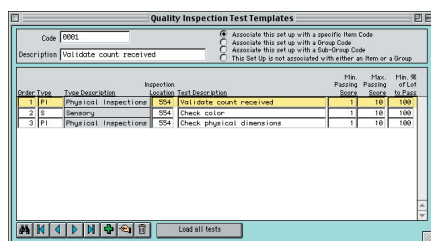

Sales Orders

Sales are the life-blood of a business and most aim to capture as much repeat business as possible. A sales order must be a road-map to satisfying the customer's requirements. To achieve this it must acquire all the relevant information and serve it up to your users in an efficient and meaningful manner.

Lot & Batch Tracking

Lot & Batch tracking for most people means just one thing – 'absolute traceability'.

Quality Control

Today's savvy-customers are on the look-out for two main things, quality and value, and quality is all about monitoring and control.
